# Wishbone UVD Renewal Tool

(UVD = UltraViolet Degradation)

**For more information & video demonstrations, please visit:**

<https://www.wishboneltd.com/renew>

- ONLY FOR USE on Replast 100% recycled plastic planks.
- Can be performed once every 3-5 years depending on the amount of "greyness" or UltraViolet Degradation (UVD) present on your Wishbone product.
- Not tested or recommended on "Wood Composite Planks"

## Preparation & Safety

- Ensure there is no flammable materials on or close to the product
- Have Portable Fire Extinguisher on-hand.
- Use in temperatures above 10 degrees Celsius
- Clean all debris between the boards
- Wash & clean all surfaces of dirt, dust, animal feces, and environmental debris.
- Planks must be completely dry prior to applying heat. You can dry them off by applying heat from a distance.
- For waste receptacles with removable interior liners, remove the liners prior to applying heat

## Application of Heat

- Keep the PROPANE PRESSURE AT OR JUST ABOVE 22 PSI. Operating the torch below 15 PSI will result in damage.
- When initially opening the propane valve, wait until pressure has stabilized and you hear a "click" before operating the torch.
- Apply the heat in a smooth, constant sideways motion similar to using spray paint.
- ENSURE CONTINUAL, STEADY SPEED when passing from one side to the other.
- Be sure to not over-touch the same portion of the same board, or "dwell" too long in one area.
- Keep a distance of 4-6" away from the planks
- Careful around the Product tag as it will melt if the heat is applied too long.
- Will not affect the powder coating if heat is applied this way
- Heat does not remove graffiti. Graffiti remover must be used and then all remnants of the cleaning solution prior to applying the heat.
- Boards are ready to touch in 1 min after applying the heat.
